Injury/Illness Toolbar

Injury/Illness Tips

- ◆ Use the Injury/Illness module to capture **Injury**, **Illness** and **Prevention** data for resources during an incident.
- ◆ Before you can define Injury/Illness data, you must select a resource in the **Resources** grid and click either **Injury**, **Illness** or **Prevention** to identify the type of data that is being captured for the resource. After one of these options is selected, the Manage Injury/Illness area becomes active.
- ◆ Use the **Prevention** option in the Injury/Illness module to identify preventative aids (e.g., aspirin, bandages, etc.) given to a resource.
When **Injury** or **Illness** is selected, you must identify an **Injury Type** for the resource.
- ◆ When **Prevention** is selected, the **Injury Type** box does not display. Identify the **Prevention** type in the **Remarks** box.
- ◆ A list of previous **Injury**, **Illness** or **Prevention** data defined for the resource displays at the bottom of the Injury/Illness window. Each time you add new **Injury**, **Illness** or **Prevention** data for the resource, it is added to the grid at the bottom of the window.
- ◆ Click **Injury**, **Illness** or **Prevention** data in the grid at the bottom of the window to edit or delete that data.
- ◆ To define default data for the Injury/Illness module, click the **Defaults** button in the Injury/Illness toolbar. You can identify the following default data:
 - Incident Type
 - Management Level
 - Estimated Average Hours Worked per Day per Resource
- ◆ If the **Manage Injury/Illness** area does not display on the Injury/Illness window, click the **Show Injury/Illness Details** button.
- ◆ To only include those resources in the Resources grid that have injury, illness or prevention data defined, click to check the **Previous Injury/Illness** button.
- ◆ To view an Injury/Illness history, either by **Resource** or by **Injury/Illness/Prevention**, click the **View History** button. Click the **Close** button on the Injury/Illness History window to return to the Injury/Illness window.
- ◆ To define **Injury/Illness Statistics** to use in the **Injuries and Frequency Report**, click the **Stats Base** button.
